

## REVIEW

on the educational and scientific program of the third level of higher education  
specialty 073 "Management"

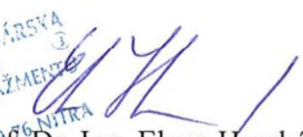

Training of highly qualified scientific personnel of the degree of "Doctor of Philosophy" requires new approaches and non-standard solutions. The reviewed educational and scientific program (ESP) of training of such specialists in the specialty "Management", which is implemented at the Bila Tserkva National Agrarian University, fully meets these criteria. The program is designed as an agreed set of educational activities, taking into account the position and needs of stakeholders in the educational process.

The educational and scientific program has a logical structure and contains cycles of general and special (professional training) and scientific and practical (pedagogical) components. Achieving the goals of ESP, obtaining appropriate learning outcomes and the formation of program competencies is ensured by a successful selection of disciplines included in the educational and scientific program. Together, they form a graduate student as a future researcher and teacher of management. Successful completion of the program gives applicants the opportunity to deepen their foreign language skills, as well as knowledge and skills of a wide range of modern methods, in particular, methods of change management, risk; strategic management technologies.

Considerable attention in the program is also paid to the practical component of postgraduate training, which aims to form the necessary skills and abilities of teaching and organizing scientific and pedagogical activities in higher education institutions. The curriculum for the training of doctors of philosophy in the specialty 073 "Management", prepared at BNAU, meets the objectives of the educational and scientific program.

We believe that it would be justified to include a representative of graduate students of this program in the project team for the development of ESP, which would provide feedback to applicants for higher education and better taking into account their requests and professional interests.

In general, the educational and scientific program of training a doctor of philosophy at Bila Tserkva NAU speciality 073 "Management" meets the requirements for this type of documents, provides a systematic approach to training and qualification of future scientists, which allows to recommend it for implementation at Bila Tserkva National Agrarian University.
